GARDEN, ORCHARD, AND FARM CALENDAR FOR JANUARY.

Written expressly for Slater's Almanac by Albert John Hockings.

GARDEN AND ORCHARD.—Dig deeply all unoccupied beds, turning in all such garden refuse as will add to the fertility of the soil by its decay. Heavy soil is much improved in texture when thrown up roughly and exposed to the influence of the summer's sun, being rendered more friable. Fork between the rows of vegetables when the soil has become hard after heavy showers. Water vegetables freely in dry weather, giving occasional dressings of liquid manure. In favourable weather sow French beans, brocoli, cabbage, carrots, cauliflowers, celery, mustard, cress, lettuce, endive, okra, peas, parsley, radish, salsify, scorzonera, prickly spinach, turnips, Brussels sprouts, and a few cucumber, vegetable marrow, and melon seeds for late crop. Plant out cauliflowers, cabbages, etc., laying a leaf over each plant to protect it from the sun for a day or two. Gather herbs for drying, also onions, garlic, and eschalots, as the tops die down. Peach, apple, and other trees should be

formed during summer by disbudbing with the finger and thumb when the shoots are ill placed, and by nipping off the ends of those which are too long or over vigorous. Vines should be tied as they grow to protect them from injury by high winds, and in doing this be careful to arrange the foliage, so as to shelter the fruit from the direct rays of the sun. Gather grapes, peaches, and apples, as they ripen. Vigorous shoots of the Isabella grapes may still be pruned to produce a second crop. Vines layered now are likely to make good roots before winter. Cuttings of any valuable new sort which it is wished to multiply quickly, should be put in during this month, in favourable weather. Carefully remove suckers from vines and fruit trees.

FIELD.—Destroy weeds before they seed; break up land in preparation for future crops; sow Cape barley, rye, and oats, for green fodder, and maize for a late crop. Keep growing crops clean.

FEBRUARY corresponds to August in Great Britain; the weather is generally excessively hot and sultry with a humid atmosphere. In February, 1884, the weather was a little warmer than usual, the mean shade temperature, 78°-10°, being 0°-8° over the average of the month for the previous ten years, and 0°-70° over the previous three years. The highest reading in shade, 99°-00°, was on the 3rd, the lowest on grass was 53°-00°, on the 1st. The mean barometric reading, 30°-023 inches, was 0°-82 inches over the average of the month for the last ten years; the highest, 30°-224 inches, was at 9 p.m. on the 13th, and the lowest, 29°-684 inches, at 3 p.m. on the 2nd. Rain fell on 10 days; the total fall, 3°-06 inches, being 4°-23 inches under the average of the previous ten years. The greatest fall in 24 hours, 2°-70 inches, was on the 2nd. The total rainfall for the year 1884, up to the 29th February, was 5°-69 inches, in 18 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR FEBRUARY.

GARDEN AND ORCHARD.—This should be an active month. Dig roughly all unoccupied beds which have been previously trenched, adding well decomposed manure. Transplant cabbages, Brussels sprouts, cauliflowers, celery, &c. Sow French beans, beet, Brussels sprouts, carrot, cauliflower, celery, mustard, cress, lettuce, radish, prickly spinach, endive, onion, peas, parsnip, and turnip. Plant out strawberries in ground previously prepared by being trenched and thoroughly manured. Mulch the melon and cucumber holes with a dressing of long stable manure: form the surface between the holes so as to catch water during thunder showers. In very dry weather, when the plants appear to suffer, give ten to twenty gallons of water in the evening to each hole, so that they may be thoroughly soaked, applying the water so that it may get into the soil where the roots are. Gather seeds as they ripen. Cucumbers, melons, French beans, &c., should be gone over daily, and gathered as soon as they are ready, whether they are required or not; for if left on to perfect their

seeds the plants cease to be productive. The fruit should be thinned from Hocking's convide and greening apples, and the branches carefully propped lest the trees be broken by its weight. Finish budding trees which are intended to stand over until spring. Collect leaf mould for use when planting fruit trees during the approaching winter. Loosen ties of budded trees. Tie up loose shoots of vines, extending them out to the sun; if the points are gathered up to a stake, see that the foliage is not bruised or injured.

FIELD.—Continue to prepare land, ploughing it deeply. Lucerne may be sown in clean, well-ploughed deep soil. Vetches or tares, Cape barley and sorghum should be sown for green food for stock. In sheltered and warm positions, 90 day maize may be sown. Early potatoes may be planted whole. Sulphate of Lime or "Superphosphate" applied to the soil greatly increases the health and productiveness of potatoes. Keep the land clean and hill up maize.

MARCH corresponds to September in Great Britain, and begins to show a pleasant decrease in temperature. In March, 1884 the weather was cooler than usual, the mean shade temperature, $73^{\circ}8'$, being $2^{\circ}10'$ under the average of the month for the previous ten years, and $2^{\circ}10'$ under the previous three years. The highest reading in shade, $92^{\circ}0'$, was on the 1st, the lowest on grass, $56^{\circ}0'$ was on the morning of the 19th. The mean barometric readings were 0.79 inches over the average of the month; the highest, 30.296 inches, was at 9 p.m. on the 24th, and the lowest, 29.718 inches, at 3 p.m. on the 11th. Rain fell on 12 days; the total fall, 4.10 inches, being 0.23 inches over the average of the month for ten years, and 1.61 inches, over the previous three years. The greatest fall in 24 hours, 1.53 inches, was on the 2nd. The total amount of rain that fell in the year 1884, up to the 31st March, was 9.79 inches, on 30 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MARCH.

GARDEN AND ORCHARD.—If previous instructions have been followed, the seed beds will be full of young plants, and there will be sufficient land well dug and manured ready to receive them. Plant out cabbages, cauliflowers, Brussels sprouts, celery, etc., in favourable weather, that is just before rain, choosing the largest and finest plants. Keep the beds free of weeds by frequent and deep hoeing. Give asparagus beds a dressing of salt. Transplant eschallots. Sow English beans, French beans, beet, carrot, mustard and cress, celery, lettuce, endive, leek, onion, peas, parsnip, radish, prickly spinach, turnip, coque tronchuda, savoy, etc. Make note of fruit trees, or vines that have been sickly or unproductive during the season, so that they may be manured, syringed, scrubbed, pruned, or grubbed out as the case may demand. An unprofitable, unsightly, or inferior tree should not be allowed to cumber the ground. No crops should be grown near fruit trees. Orange

trees are often killed by digging about them; their roots being principally on the surface. All land intended to be planted with fruit trees during the approaching season should be trenched and manured this month, if not already done. All stiff or retentive soils should be carefully drained six inches deeper than they are trenched, regardless of the inclination of the surface. It should be remembered that the roots of the trees will be under the surface where the water will be retained, unless drainage be provided. Orange trees with the shoots in a state of rest may be transplanted this month.

FIELD.—Sow lucerne, clover, rye grass, prairie grass, oats, barley, wheat, vetches or tares, and sorghum. Sow main crops of potatoes. Hoe early potatoes; gather maize as it ripens; cut tobacco leaves as they arrive at maturity. Sow mangold and Swede turnips for winter food for stock.

APRIL corresponds to October in Great Britain; cool weather is now setting in and nights are frequently chilly. In April, 1884, the weather was a little warmer than usual, the mean shade temperature, 72°-30°, being 1°-0° over the average of the month for the previous ten years, and 0°-70° over the previous three years. The highest reading in shade, 90°-0°, was on the 3rd, the lowest on grass, 51°-0°, was on the morning of the 28th. The highest barometric reading, 30°-295, was at 9 a.m. on the 19th, and the lowest, 29°-820 inches, at 3 p.m. on the 7th. The mean barometric reading, 30°-086 was 0°-008 inches above the average of the month for the previous ten years. Rain fell on 15 days; the total fall 3°-48 inches, being 0°-87 inches under the average of the month for the previous ten years, and 0°-57 inches under the previous three years. The greatest fall in 24 hours, 1°-08 inches, was on the 30th. The total amount of rain which fell in the year 1884, up to 30th April, was 13°-27 inches, on 45 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR APRIL.

GARDEN AND ORCHARD.—Keep down weeds by continual hoeing. Thin out plants that are overcrowded. Divide and plant out pot herbs, giving water if requisite, until they are established. Plant out cabbages, cauliflowers, etc., in favourable weather. Sow English beans, mustard and cress, lettuce, endive, leek, onions, peas, radish, etc., for succession. Sow hardy annual flower seeds. Evergreen shrubs, roses, and bulbs, may be planted. Where practicable the transplanting of fruit trees, should not be proceeded with; and, if done with care, with as much earth as possible round the roots, they will soon emit new roots, and be established in their positions before the final fall of the leaf. This applies specially to evergreen fruit trees, such as lemons, oranges, dates, mangoes, loquats, olives, tamarinds, etc. In transplanting take care that a sufficiently large hole is dug to allow of the roots having ample room; if any of the roots

have been bruised or broken in the moving, let the damaged portions be cleanly cut off with a sharp knife; do not set the transplanted shrub or tree any lower in the new ground than in its original place. For some days it is well to shade it, either by matting on sticks or any other contrivance that may answer the desired purpose, taking care that the wind does not blow it down. Water should also be freely applied till the tree has settled itself in its new position. Prop up bananas which have heavy bunches of fruit, as they are apt to be blown down by the winds now prevailing.

FIELD.—Sow vetches, lucerne, wheat, barley, oats, mangold and Swede turnips. Gather sorghum and imphee as they ripen, or the birds will either consume or scatter it. Plough land for future crops. Cut and house tobacco as soon as it arrives at maturity.

MAY corresponds to November in Great Britain. The Queensland winter may now be considered as having begun. Weather generally cool and enjoyable. In May, 1884, the weather was a little cooler than usual, the mean shade temperature, 65° 2', being 0° 4' under the average of the month for the previous ten years, and 1° 3' under the previous three years. The highest reading in shade, 80° 0', was on the 11th, the lowest on grass, 42° 0', was on the morning of the 16th. The highest barometric reading, 30.318, was at 9 p.m. on the 29th, and the lowest, 29.879 inches, at 3 p.m. on the 13th. The mean barometric reading, 30.109 inches, was 0.058 under the average of the month. Rain fell on 16 days; the total fall, 10.81 inches, being 6.41 inches over the average of the month for the previous ten years, and 7.44 inches over the previous three years. The greatest fall in 24 hours, 3.16 inches, was on the 3rd. The total amount of rain which fell in the year, 1884, up to the 31st May, was 22.90 inches, on 60 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MAY.

GARDEN AND ORCHARD.—Transplant onions, garlic, eschalots, rhubarb, etc. Sow lettuce, endive, leek, onion, peas, radish, mustard and cress, cabbage, turnip, carrot, parsley, and pot herbs. Dig beds intended for asparagus. In making beds choose the best soil which the garden affords, the ground must be dug deep and most plentifully manured. Rhubarb may now be planted in deeply-dug, well manured beds. The onion crop sometimes suffers severely from the ravages of a green grub which is in some soils in large numbers. They come out at night and cut off the young onions level with the surface as if cut off with a knife. Land intended for this crop should be previously examined for these pests, and if possible receive a dressing of soot, which would not only prove very obnoxious to the grubs, but would be a valuable manure for the onions.

Transplant fruit trees and evergreen shrubs. Do not plant too deep; put fine mould among the roots, making it firm, using water copiously, until the soil is wet. Transplant strawberries into leaf mould or well decayed cow dung, giving them abundance of water during their growing season. In cold situations, protect tropical fruit trees, and throw a little hay over the pine apple plants, with the same object.

FIELD.—Sow vetches, barley, oats, rye, wheat, also Lucerne and other grasses. Cut tobacco. Earth up potatoes. Rye, as green fodder, is much relished by cattle and horses, and if not allowed to go to seed, it will make a good sward for grazing over, being green and succulent during winter and early spring.

JUNE corresponds to December in Great Britain; weather generally cool, with fine clear nights and sometimes heavy dewfall. In June, 1884, the weather was a little warmer than usual; the mean shade temperature, 61° 8', being 1° 7' over the average of the month for the previous ten years, and 1° 3' over the last three years. The highest reading in shade, 77° 0', was on the 8th, the lowest on grass, 41° 0', was on the morning of the 21st. The highest barometric reading, 30.370 inches, was at 9 p.m. on the 25th, and the lowest, 29.732 inches, at 3 p.m. on the 16th. The mean barometric reading, 30.158 inches, was 0.045 inches over the average of the last ten years. Rain fell on 9 days; the total fall 2.22 inches, being 0.66 inches over the average of the month for the last ten years, and 1.16 inches over the last three years. The greatest fall in 24 hours, 1.10 inches, was on the 15th. The total amount of rain which fell in the year 1884, up to the 30th June, was 25.12 inches, on 69 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JUNE.

GARDEN AND ORCHARD.—No colonial grown cabbage seed should be sown until after September, as it runs to seed when the plants are ready to heart. The English seed does not run until the second season, and will therefore heart perfectly. Transplant horseradish, eschaloats, rhubarb, strawberries, seakale, etc. Dig over old rhubarb, seakale, and asparagus beds, giving them plenty of good rotten manure. Sow broccoli, Brussels sprouts, cabbage, red cabbage, cauliflower, lettuce, endive, peas, English beans, radish, &c. To grow water cresses, dig a trench, as if for celery; turn in abundance of well-decayed manure, at the bottom, sifting some fine soil over it, and dibble the cuttings in at a foot apart, give the whole a good watering. Orange trees which are not in good health should have their trunks and large branches scrubbed with a scrubbing brush, and washed clean before the spring growth commences. The surface soil to the full circuit of the foliage of the tree should

have a dressing of stable manure. Apple trees affected with American blight should have the earth removed from the roots near the surface, and they should be painted with castor oil, or strong Gishurst Compound. Some sorts of apple are "blight proof," and these should have the preference when planting, as far as practicable; and the others should be worked upon stocks which are blight proof. Transplanting fruit trees and vines should be proceeded with vigorously. Prune fruit trees and vines, protect bunches of bananas in cold situations, by covering each with a light bag open at the bottom.

FIELD.—The arrowroot will fill out rapidly as the cold checks the growth at the top. Sow oats, lucerne, rye grass, vetches, prairie grass, &c. Prepare land in warm situations, for sowing with maize, and planting with potatoes next month. Early sown wheat often escapes rust and other ills which affect later crops.

JULY corresponds to January in Great Britain, and like it, is the coldest month of the year, though the sun has considerable power in the middle of the day. In July, 1884, the weather was warmer than usual, the mean shade temperature, 61.7°, being 2.0° over the average of the month for the previous ten years, and 2.3° over the previous three years. The highest reading in shade, 79.0°, was on the 10th, the lowest on grass, 39.0°, was on the morning of the 19th. The mean barometric reading, 30.168 inches, was 0.015 inches over the average of the month; the highest 30.470, was at 9 p.m. on the 18th, and the lowest, 29.930 inches, at 3 p.m. on the 15th. Rain fell on 19 days; the total fall, 5.13 inches, being 2.42 inches over the average of the month for the previous ten years, and 3.93 inches over the previous three years. The greatest fall in 24 hours, 1.60 inches, was on the 7th. The total amount of rainfall during the year 1884, up to the 31st July, was 30.25 inches, on 88 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JULY.

GARDEN AND ORCHARD.—Plant asparagus beds. Sow cauliflowers, carrots, beans, lettuce, endive, radish, spinach, etc., On sowing seeds after rain, see that the land is in a friable condition. If too wet it will clog and bind together. The soil should never be walked over or disturbed by sowing or digging the crops until it is sufficiently dry to be friable. Plant out onions and eschulots. Three or four days after planting, rake the soil between the rows in dry weather, it will kill thousands of young weeds. Finish pruning fruit trees and vines. Plant out fruit trees and vines, and cuttings of grape vines, and such trees as are propagated in that manner. Graft young orange trees. The Seville orange forms the best stock upon which to graft approved sorts. Prepare land hitherto neglected, that all planting may be finished by the end of next month if possible. Eradicate docks,

and give a dressing of salt to the vines and fruit trees, lightly forking in well-decayed manure where necessary.

FIELD.—Finish planting lucerne. Sow oats, vetches, etc., Prepare land for potatoes, maize, tobacco, sugar-cane, carrots, mangold wurzel, chicory, etc., Plant potatoes and maize. Take up and prepare arrowroot as the crop matures.

HINTS.—Never grow the same crops, nor crops of the same family twice on the same spot, without an intervening crop of a different nature.

Never transplant shrubs, or trees in a growing state. However carefully it may be done the check is dangerous and often fatal.

Let the drainage of the ground be your first care. It is impossible to succeed to any extent with vegetables or flowers, when the water is stagnant in the soil.

AUGUST corresponds to February in Great Britain, and is for the most part cold, but towards the end a rise in the temperature may be noticed. In August 1884, the weather was slightly warmer than usual, the mean shade temperature, 63.1°, being 0.3° over the average of the month for the previous ten years and 0.1° over the previous three years. The highest reading in shade, 84.0°, was on the 27th; the lowest on grass, 40.0°, was on the 21st. The highest barometric reading, 30.120 inches, was at 9 a.m. on the 23rd, and the lowest, 29.852 inches, at 3 p.m. on the 19th. The mean barometric reading, 30.131 inches, was .006 inches lower than the average of the month. Rain fell on 5 days; the total fall, 0.38 inches, being 1.84 inches under the average of the month for the previous ten years. The maximum fall during 24 hours, 0.17 inches, was on the 1st. The total amount of rainfall during the year 1884, up to the 31st August was 30.63 inches, on 93 days.													
GARDEN, ORCHARD, AND FARM CALENDAR FOR AUGUST.													
GARDEN AND ORCHARD.—Peas sown this month should have a cool aspect. A dressing of salt at this season at the rate of 7 or 8 lbs. to the perch would be a great advantage to most soils, tending to sweeten the land, destroy insects, discourage weeds, fungus, and mildew, and to retain moisture. Sow beet, broccoli, melons, Brussels sprouts, cucumber, lettuce, endive, okra, parsley, pumpkins, vegetable marrow, radish, rhubarb, round spinach, tomato, tobacco, carrot, (large sowing), leek, cabbage, cauliflower, chervil, turnip, parsnip, etc. Plant out horseradish, rhubarb roots, herbs, sea-kale, asparagus, Jerusalem artichokes, ginger, etc. Destroy weeds while young, and syringe with Gishurst Compound, plants which are attacked with aphids. Endeavour to finish planting fruit trees, vines, and other plants, as the sun will be gaining power, which will increase the labour and risk. Young orange trees which show too much bloom should have it removed, and receive a little liquid manure to promote foliage. If any of the orange trees are affected with the aphids, they should be well syringed with a solution of Gishurst Compound, or of water in which a small quantity of soft soap and sulphur have been dissolved. A small quantity of Kerosine in a bucket of warm water, has been found very effectual against scale, blight, etc. It should be well mixed, syringed on and kept from the roots of the trees. Graft China pears, as they break very early. Any work left over from last month should be completed. Keep the land clean and the surface open to receive the dews and showers. Earth nuts are a profitable crop in light friable soil, especially near the sea shore, and in soil having lime in it.													
FIELD.—Keep the crops clean. Plant potatoes, maize, rice, yams, arrowroot, etc. Hoe up potatoes. Sow sorghum, imphee, teosinte, and tobacco. Silk worms will now require constant attention, feeding them frequently with young and tender leaves.

SEPTEMBER corresponds to March in Great Britain. In September, 1884, the weather was slightly warmer than usual, the mean shade temperature, 68°12', being 0°6' over the average of the month for the previous ten years, and 0°32' over the previous three years. The highest reading in shade, 93°, was on the 24th; the lowest on grass, 45°52', was on the morning of the 12th. The highest barometric reading, 30.481 in., was at 9 p.m. on the 3rd, and the lowest 29.674 in., at 3 p.m. on the 26th. The mean barometric reading, 30.126 in., was .002 in. over the average of the month. Rain fell on nine days; the total fall, 0.87 in., being 1.21 in., under the average of the month for the previous ten years. The greatest fall during twenty-four hours, 0.25 in., was on the 17th. The total rainfall for the year 1884, to September 30th, was 31.50 in., on 102 days. The rainfall for the same period in 1883 was 27.32 in. on 91 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR SEPTEMBER.

GARDEN AND ORCHARD.—As summer grass and other summer weeds now make their appearance, it is important to keep the land thoroughly clean. Take every opportunity to collect manure of all kinds, to be thrown into well-puddled tanks to rot down for use in autumn and winter. Valuable lessons may be learned from the Belgian farmers upon this important but much neglected subject. The Japanese are also vastly superior to us in the knowledge and practice of manuring. During the summer months in this colony manure should generally be applied in the liquid form. See that crops are not planted too closely so as to be crowded. Trench vacant land, in preparation for future crops, leaving the surface rough, to mellow by exposure. Sow English and French beans, parsley, beet, capsicum, chili, cardoons, mustard, cress, lettuce, endive, eggplant, okra, Cape gooseberry, radish, rhubarb, round spinach, tomato, tobacco, cucumber, melons, pumpkins, vegetable marrow, carrots, parsnips, etc. Transplant cabbages, caul-

flowers, eschalois, etc. Plant Jerusalem artichokes, rhubarb roots, herbs, sea-kale, asparagus, ginger, earth nuts, etc. Sow roseella. In dry weather give recently planted fruit trees sufficient water at the roots, leaving the surface to be kept damp by a mulching of stable litter. Destroy all caterpillars that infest the vines about this time. Attend promptly to the disbudbing of grape vines; removing all suckers and superfluous shoots as soon as they appear. Tie up fruiting shoots to the trellises as they advance. Graft apples and pears.

FIELD.—Keep the land clean and loose among growing crops. Plant arrowroot, yams, sweet potatoes, tobacco, etc. Sow imphee, sorghum, and maize for green fodder. Many of the new sorts of sugar-cane which have been under trial have proved to be hardy and productive. Among these, the *Crode* cane stands high in consequence of its present reputation for heavy yields of excellent sugar, and its healthiness.

OCTOBER corresponds to April in Great Britain; the weather begins to be unpleasantly hot, with occasional thunder and sometimes heavy hail storms. In October, 1883, the weather was warmer than usual, the mean shade temperature, 72° , being 0.5° over the average of the month for the previous ten years, and 1.7° over the average of the previous three years. The highest reading in shade, 91.0° , was on the 22nd; the lowest on grass, 45.0° was on the morning of the 1st. The mean barometric reading, 30.081 inches, was $.032$ inches over the average of the month; the highest reading, 30.344 inches, was at 9 a.m. on the 31st, and the lowest, 29.686 inches, at 3 p.m. on the 28th. Rain (which varies much in quantity during the month) fell on 11 days; the total fall 1.58 inches, being 1.79 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 0.85 inches, was on the 28th. The total rainfall for the year 1883, to 31st October, was 28.90 inches, on 102 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR OCTOBER.

GARDEN AND ORCHARD.—Keep the crops clean, mulch them and give water where necessary. Sow parsley, English beans, French beans, mustard, cress, lettuce, endive, okra, radish, round spinach, beet, vegetable marrow, melon, carrot, cucumber, tomato, rosella, etc. Sow St. John's Day cabbage, which is the best for summer culture, being early, hardy, of fair quality, and notwithstanding heat, dry weather, and aphids, better than any other. Convert all waste vegetables into manure in some form; either to feed pigs, or throw them into the tank to rot, or burn them, out of the way, and use the ashes. Thin out the fruit on China peaches of all kinds, and carefully eradicate the suckers which spring from the root, cutting them close to their origin neatly with a knife. Remove all the strong watery shoots which fill up the inside of the tree, so as to admit sun and air, and leave the whole strength of the plant to mature the crop. Support the branches of the trees, as the fruit swells.

Examine the orange trees and if either thrip, smut, coccos, or fungus appear on the stems, scrub them as recommended in June. Tie up the vines as they grow, being careful not to injure the foliage (which performs the function of both lungs and stomach for the plant), and see that the fruit is sufficiently protected from the direct rays of the sun. It is a good plan to secure fine fruit, to thin out with a pair of sharp pointed scissors some of the grapes in overcropped bunches. Sulphur the vines upon the first appearance of Oidium. Plant bananas and pine apples. Trench and drain the land intended for planting with fruit trees in the winter; and if well cultivated, one crop taken from it would improve its texture.

FIELD.—Clean and earth up growing crops. Plant yams, earth nuts, coffee, arrowroot, ginger, sweet potatoes, and sugar-cane. Sow sorghum, impee, etc.

NOVEMBER corresponds to May in Great Britain. Summer has now fairly set in. In November, 1883, the weather was cooler than usual, the mean shade temperature, 74° 8', being 1° 6' under the average of the month for the previous ten years, and 0° 4' under the average of the previous three years. The highest reading in shade 33° 0, was on the 15th; the lowest on grass, 51° 5', was on the morning of the 13th. The mean barometric reading, 30° 084 inches, was 138 inches above the average of the month; and the highest reading, 30° 364 inches, was at 9 p.m. on the 23rd, and the lowest, 29° 593 inches, at 3 p.m. on the 11th. Rain (which varies much in quantity during this month) fell on 4 days; the total fall 0° 960 inches, being 2° 73 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 0° 35 inches was on the 6th. The total rainfall for the year 1883 to November 30, was 29° 50 inches on 106 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR NOVEMBER.

GARDEN AND ORCHARD.—At this season the beds should have the ridges laid across the hills in sloping ground, so as to catch the showers. Thin cucumber and melon beds where overcrowded, and loosen the soil if it is bound. Fasten down the shoots with wooden pegs so as to cover the ground evenly; it steadies the plants and protects them from much injury from the wind during storms. Sow French beans, melons, broccoli, Brussels sprouts, mustard, cress, cucumber, lettuce, endive, celery, okra, radish, roseella, pumpkins, etc. Thin early peaches as soon as the fruit is fit for cooking. Mulch the trees a considerable distance around the stem. Clean out all superfluous shoots to throw the whole strength of the plant into the crop; not injuring or removing any of the foliage unnecessarily. Remove suckers from grape vines, stop straggling branches, and rub off weak ill-placed shoots. Vigorous old Isabella vines upon having the ripest of the present season's rods pruned during this and next month, will give a second crop of fruit. The cuttings also, if planted,

will form strong roots before the planting season. Apricots and China peaches should be budded. Plant banana and pine apple suckers. Trenchland intended for planting next season, to give it the sweetening influence of the summer's sun. Where pine apples are largely grown, it will pay to thin out the suckers early this month, as it not only causes the summer crop of fruit to be larger, but the young suckers which appear on the pruned shoots will produce winter pine apples, which sell at a high price. The most convenient implement for thinning out, is the large strong-handled South Sea Island knife, kept sharp at both sides of the point, and used with a downward thrust.

FIELD.—Keep the land clean with the horse hoe. Stop tobacco plants as required, to direct the sap into the leaves intended for the crop, and remove caterpillars. In making oaten hay, cut the crop when well in ear, but before the seed is near maturity; the whole plant is then in the most nourishing condition.

DECEMBER corresponds to June in Great Britain. It is a month of usually fierce sunshine and cloudless skies; the nights are sometimes pleasantly cool. In December, 1883, the weather was warmer than usual during the month, the mean shade temperature, 79.5, being 1.1° over the average of the month for the last ten years, and 1.8° over the average of the previous three years. The highest reading in shade, 106.0°, was on the 13th; the lowest on grass, 57.9°, was on the morning of the 29th. The mean barometric reading, 29.906 inches, was .0013 inches under the average of the month; the highest reading, 30.223 inches, was at 9 p.m. on the 1st, and the lowest, 29.527 inches, at 3 p.m. on the 20th. Rain (which varies much in quantity during this month) fell on 8 days; the total fall, 2.72 inches, being 2.88 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 1.39 inches, was on the 13th. The total rainfall for the year 1883 was 32.22 inches on 114 days, being 10.49 inches less than the rainfall of 1882.

GARDEN, ORCHARD, AND FARM CALENDAR FOR DECEMBER.

GARDEN AND ORCHARD.—The seeds should be protected during the summer months from the direct rays of the sun by some light cover a foot or two above the ground. Thin calico or light open brushwood, not too dense, would be suitable. If the seed beds were well watered with liquid manure, so as to thoroughly soak the soil, a few hours before sowing the seed, and the latter was covered by sifting over it some stable litter, there would not be so many failures even in summer. Sow cabbage, cauliflower, French beans, mustard, cress, lettuce, endive, okra, radish, etc. All vacant land should be well manured and dug two spits deep. Manure and dig as the crop comes off, and the land will be ready for planting after the first shower. Place straw under the peach trees upon which the fruit may fall without bruising. Straggling wood shoots

should be stopped, to keep the trees in form, and prevent the weaker branches being robbed of their share of nourishment. Trench and manure land intended for planting with fruit trees or vines. On the slightest appearance of Oidium among the vines or American blight among the apples, dress them as previously directed. Those who object to the use of sulphur and lime in their dry state may boil one pound of sulphur and one pound of lime in a gallon of water for half-an-hour; one pint of this, when strained, may be mixed with ten gallons of water, and applied to the affected vines with a syringe.

FIELD.—Keep crops clean. Dig potatoes as soon as ripe, as they will not keep in the soil; and have them collected as they are dug, or the sun will cause them to rot. Plant maize.

QUEENSLAND.

THE Colony of Queensland, formerly known as the Moreton Bay District—comprises the whole of the North-Eastern portion of the Continent of Australia; its boundaries being—on the North the Gulf of Carpentaria and Torres Strait, on the East the Pacific Ocean, on the West the Northern Territory of South Australia—the dividing line being the 141st meridian of longitude from the 29th to the 26th parallel, and thence the 138th meridian—and on the South the Colony of New South Wales. Its estimated area, exclusive of the Islands contiguous to the coast, which however, belong to Queensland—is about 669,520 square miles, or 428,492,800 acres, being about twelve times the size of England and Wales. Its extreme length from N. to S. is 1300 miles, its breadth 800 miles, the coast line being about 2500 miles. The Second Oldest Mutual Life Office in these Colonies, and the
First to Free Assurance From Restrictions.

The Association's POLICIES are INDEFEASIBLE from date of issue, and NON-FORFEITABLE while surrender value lasts. Its Conservative Management secures business at a lower rate of expenditure than any other Mutual Life Office established in Australia within the last thirty years; and careful selection of lives has resulted in a remarkable reduction of its yearly mortality experience, as regards number, amount, and percentage on the existing Assurances.

REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Every birth must be registered within sixty days, and every death within thirty days next thereafter respectively; any neglect of this regulation renders the parties, whose duty it is to register, liable to a fine not exceeding £10. If sixty days have elapsed from the date of birth, the law requires the parent, or other person making the application to register such birth, to pay a fee of two shillings and sixpence, and to make a solemn declaration of the facts before a Justice of the Peace, prior to the registration. If possible in all cases the father or mother ought to sign as informant. If unable to write, let a mark be made. No birth can be registered after three years have elapsed from the date thereof; but a record will be made in the Registrar General's office if information be supplied respecting such a birth.

Every Minister who has celebrated a marriage must within one month thereafter, transmit (in accordance with the Act 28 Victoria No. 15) the original certificate to the Registrar of the District, and every minister who fails to transmit the certificate to the District Registrar, is liable to a fine of NOT LESS THAN £10 and not exceeding £50. Marriages must be solemnised between the hours of 8 a.m. and 8 p.m. Persons under age must produce the written authority of parents or guardians, signed by them in the presence of a Justice of the Peace, Registered Minister, or District Registrar, or the marriage cannot take place.

In every case of Burial, the Minister or person officiating at any religious service at such burial, ought to receive from the undertaker or person having charge of the funeral, a certificate from the District Registrar, certifying the registration of the death, unless in the case of inquest, when a certificate from the Coroner or Magistrate holding the inquest, will be sufficient; and if any dead body shall be buried without such certificate, the person who may bury the same, or perform any funeral or religious service for the burial, or who shall in any way dispose of the body, shall forthwith give notice of the facts to the District Registrar. Undertakers are bound under a penalty not exceeding £10 to lodge with the District Registrar, IMMEDIATELY after the burial, a Certificate of such burial signed by themselves and COUNTER-SIGNED BY TWO WITNESSES.

SIGNALS IN USE AT BRISBANE OBSERVATORY.

FOR DENOTING THE MOVEMENTS OF VESSELS.

The numbers of the Flags may be easily recognised, from their comprising as many divisions or stars as they are intended to represent. Any number higher than nine is indicated by one Flag over another—2 over 8 indicating 28 (Sydney). When two of the same figure require to be shown, as 11 or 22, the White Flag is used to indicate the second number—11 (Cork), would be shown by the Flag for 1 and the substitute beneath it.

Telegrams to stations within the colony, marked "Urgent," will be received and transmitted as "urgent messages," and will take precedence of all ordinary messages. Double rates are charged for these messages.

Envelopes containing messages for transmission by telegraph from any place in Queensland, posted at any Post Office not a Telegraph Office, with the words "Telegraph Message only," written thereon above the address, and directed to the nearest Telegraph Office, may be forwarded free of postage; and the officers in charge of the Telegraph Office to which such envelopes may be addressed, shall transmit the message contained therein to its destination, provided the full fee, either in cash or postage stamps, be also enclosed.

A list of the Telegraph Stations in Queensland will be found in the Postal Gazetteer on page 76.

TELEPHONE EXCHANGE.

Telephone lines will be erected and kept in order by the Post and Telegraph Department, on payment in advance of an annual rental at the rate of £5 for the first mile or any intermediate distance, and a proportionate rate of 25s. for every additional quarter of a mile or fraction thereof.

TELEGRAPHIC INFORMATION—Continued.

Instruments must be provided by subscribers, and where connected with Exchanges are maintained in working order by the Department, for which an extra annual charge of £1 for each instrument is made.

INTERNATIONAL TELEGRAMS.

By the system of registration of name and address, and the adoption of the word scale of charging, the cost of telegraphing between Brisbane (or any other leading town in Queensland) and London, and many of the principal cities of India, China, Japan, Europe, United States, and other countries, has been greatly reduced. It may be necessary to explain that the name and address of the sender and receiver being registered at the points of departure and arrival, a single word, letter, or number, serves for their identification.

The principal conditions under which messages are transmitted, are as follows:—

Words must not exceed ten letters, otherwise they are charged as two words. Groups of figures will be charged at the rate of three to the word. Telegrams may be written in plain language, in code language, or in secret language.

Registration can be effected at the Central Telegraph Office, Brisbane. No fee is charged. Messages can also be sent through Reuter's Telegraph Co.

DIRECTIONS FOR MAKING A WILL.

A WILL cannot be made in language too simple or concise; it must be written with ink, and must be signed at the end of each sheet (if there be more than one) by the testator in the presence of TWO or more witnesses.

The witnesses, who *must not be interested in the will*, must strictly comply with every particular required by the attestation clause, at the end of which clause they must sign their names. A witness is not bound to know the contents of the Will.

FORM OF A WILL.

This is the last Will and Testament of me
made this day of One thousand
eight hundred and eighty as follows. I
give, devise, and bequeath all my messages, lands,
tenements, and hereditaments, and all my house-
hold furniture, ready money, money secured by
life assurance, goods and chattels, and all other
my real and personal estate and effects whatsoever,
unto my dear wife [or other person as may be]
her heirs, executors, administrators,
and assigns, to and for her and their own absolute
use and benefit, according to the nature and
quality thereof respectively, subject only to the
payments of my debts, funeral and testamentary
expenses, and the charges of proving and register-
ing this my Will. And I appoint my said wife
executor of this my Will, and hereby revoke all
other Wills.

In witness whereof I have hereunto set my hand
the day and year above written.

Signed, published, and acknowledged by
the said as and for his last Will
and Testament, in the presence of us, who
in his presence and at his request, and in
the presence of each other, have subscribed
our names as witnesses.

A CODICIL

To a Will is to be made with the same regulations
as the Will itself, and may be written thus:—This
is a Codicil to my last Will and Testament, bearing
date the day of 188
and which I direct to be taken as part thereof. I
give, devise, and bequeath, &c. As witness my
hand this day of 188

NOTE.—Obliterations and alterations of any sort
in a Will ought, if possible, to be avoided; when of
necessity made, they must be signed by the Testa-
tor and Witnesses on the margin, or as near to the
alteration as possible.

Marriage after making a Will renders the Will
void.

If a witness is interested in the Will the claim
to such interest becomes forfeited.

If a person wishes to dispose of all his property
in one gift, the words, "all my real and personal
estate," may be used.

Personal property left without a Will, is devis-
able as under:—If the deceased should leave
Children and no Widow, the whole property is to
be divided equally among the Children. If he
leave a Widow and Child or Children, the former
is entitled to one-third, and the latter to the re-
maining two-thirds. If he leave a Widow and no
Child, the former is entitled to half, and the next
of Kin the remainder as follows:—A Father, the
whole amount; if no Father, a Mother, Brothers,
or Sisters, or their issue, equal portions; if none,
Uncles, Aunts, Nephews, and Nieces, equal por-
tions.

The Queensland Times,
[ESTABLISHED 1859.]
IS THE LEADING JOURNAL IN WEST MORETON.

It is one of the oldest and most influential papers in the colony, having been in existence for upwards of twenty-one years. It is published at Ipswich every TUESDAY, THURSDAY AND SATURDAY MORNING. It has a very large circulation, not only in the thickly-settled and flourishing district of West Moreton, but also on the Darling Downs, and throughout South-western Queensland. SUBSCRIBERS CAN COMMENCE AT ANY TIME.

THE QUEENSLAND TIMES IS THE CHEAPEST NEWSPAPER IN QUEENSLAND,

Being only 5s. per Quarter in advance; 6s. Credit.

With each Saturday's Issue is presented gratis a LITERARY SUPPLEMENT, containing reading matter of the most interesting character under the following headings.—Poetry, the Novelist, the Sketcher, Humour, the Naturalist, the Family Circle, and Fun. The supplement alone is worth the price of subscription.

TO ADVERTISERS,

**PASTORAL and AGRICULTURAL.**—These departments being connected with the staple industries of Australia, are regarded as special features of the *Mail*. Current legislation is carefully considered, so that the interest of Graziers and Farmers may be properly conserved; and new inventions calculated to be useful on Farm or Station receive prompt attention. WHAT EVERY TRAVELLING TRUNK & HOUSEHOLD  
in the World ought to Contain—

A BOTTLE OF

# ENO'S FRUIT SALT.

JEOPARDY OF LIFE.—THE GREAT DANGER OF DELAY.

YOU CAN CHANGE THE TRICKLING STREAM, BUT NOT THE RAGING TORRENT.

WHAT EVERYBODY SHOULD READ.—How important it is to every individual to have at hand some simple, effective, and palatable remedy such as

## ENO'S FRUIT SALT,

to check disease at the onset! For this is the time. With very little trouble you can change the course of the trickling mountain stream, but not the rolling river. It will defy all your tiny efforts. I feel I cannot sufficiently impress this important information upon all Householders or Ship Captains, or Europeans generally, who are visiting or residing in any hot or foreign climate. Whenever a change is contemplated, likely to disturb the condition of health, let ENO'S FRUIT SALT be your companion, for, under any circumstances, its use is beneficial, and never can do harm. When you feel out of sorts, yet unable to say why, frequently without any warning you are suddenly seized with lassitude, disinclination for bodily or mental exertion, loss of appetite, sickness, pain in the forehead, dull aching of back and limbs, coldness of the surface, and often shivering, &c., then your whole body is out of order, the spirit of danger has been kindled, but you do not know

where it may end. It is a real necessity to have a simple remedy at hand, that will always answer the very best end, with a positive assurance of doing good in every case and in no case any harm. The pilot can steer and direct as to bring the ship into safety, but he cannot quell the raging storm. The common idea when not feeling well is, I will wait and see—perhaps I shall be better to-morrow; whereas, had a supply of ENO'S FRUIT SALT been at hand, and use made of it at the onset, all calamitous results might have been avoided. What dashes to the earth so many hopes, breaks so many sweet alliances, blasts so many auspicious enterprises, as untimely death? It is not exaggeration, but simple fact, when I state compared with the immense benefit I may derive from the sale of this Preparation is absolutely nothing as compared with the immense benefit by those who use it.

**HEADACHE AND DISORDERED STOMACH.**—"After suffering for nearly two and a-half years from severe headache and disordered stomach, and after trying almost everything, and spending much money without finding any benefit, I was recommended by a friend to try your Fruit Salt, and before I had finished one bottle I found it doing me a great deal of good, and now I am restored to my usual health; and others I know that have tried it have not enjoyed such good health for years.—Yours most truly ROBERT HUMPHREYS, Post Office, Barrasford."

**IMPORTANT TO TRAVELLERS AND ALL LEAVING HOME FOR A CHANGE.**—"We have for the last four years used your Fruit Salt during several important survey expeditions in the Malay Peninsula, Siam, and Cambodia, and have undoubtedly derived very great benefit from it. In one instance only was one of our party attacked with Fever during that period, and that happened after our supply of Fruit Salt had run out. When making long marches under the powerful rays of a vertical sun, or tramping through swampy districts, we have used the Fruit Salt two and three time a day. The Fruit Salt acts as a gentle aperient, keeps the blood cool and healthy, and wards off fever. We have pleasure in voluntarily testifying to the value of your preparation, and our firm belief in its efficacy. We never go in the jungle without it, and have also recommended it to others.—Yours truly, Commander A. J. LOFTUS, F.R.G.S., his Siamese Majesty's Hydrographer; E. C. DAVIDSON, Superintendent Siamese Government Telegraphs.—Bangkok, Siam, May, 1883.—J. C. ENO, Esq., London."

**THOUSANDS OF MILES IN INDIA.**—"For many years I have found ENO'S FRUIT SALT of the utmost value in the hot and dry seasons, also in the monsoons. I have travelled some thousands of miles in India during the last thirteen years, and in all the various changes of climate I have found ENO'S FRUIT SALT the most refreshing beverage I could get, especially after long, heavy marches, and other fatiguing duties, to which the British soldier of late has been exposed. I have always been able to keep a supply of the FRUIT SALT on hand, and could obtain it in most stations. My dear wife, during her travail found it to be the most useful thing that could be obtained. Many others here have found ENO'S FRUIT SALT better than any beverage yet in the Indian market. I am, yours &c., A. WARDER, Central Military Prison, Poona, Bombay, January 30, 1884.—To Mr. J. C. ENO."

**THE REGION OF THE ETERNAL FIRE.**—"Charles Marvin, in his account of a journey to the Petroleum Region of the Caspian, says, 'It was anticipating history a bit, but there is very little doubt that before long it will be possible to do the journey from London to the Caspian—a distance of over 2,500 miles—in a week.' Any medicines the traveller may require can easily be obtained at the chemists' shops in Russian towns. Above all, a few bottles of ENO'S FRUIT SALT, perhaps the best medicine in the world for the Caspian region, where the heat and the dust occasionally provoke symptoms needing a gentle and invigorating treatment."—From *Newcastle Daily Chronicle*.

**THE SECRET OF SUCCESS.**—"A new invention is brought before the public, and commands success. A score of abominable imitations are immediately introduced by the unscrupulous, who, in copying the original closely enough to deceive the public and yet not so exactly as to infringe upon legal rights, exercise an ingenuity that, employed in an original channel, could not fail to secure reputation and profit."—ADAMS.

**CAUTION.**—Examine each bottle and see that the capsule is marked "ENO'S FRUIT SALT." Without it you have been imposed on by a worthless imitation. Sold by all Chemists. DIRECTIONS IN SIXTEEN LANGUAGES HOW TO PREVENT DISEASE.
